

# MEETING REPORT

**Team Name:**            **Date of Meeting:**    11/04/2023

**Start Time:** 11:00   **End Time:** 13:00   **Meeting Location:** Epoka University

**Moderator:** Enris Kumi   **Recorder:**   Faik Koprenca

**Other Members Present:** Enris Kumi

Faik Koprenca

Daniel Abdiaj

Redi Ceni

Fjoralb Tashi

Ervin Shyti

Beniamin Lloshi

**Members Absent:** None

**Topics Discussed:** As of April 11th, 2023, the frontend team has been working on two main topics: creating a user interface (UI) draft and researching login/signup functionality with Amplify. The UI design process involves both the visual design and development of the application's interface, including the creation of buttons, forms, and navigation menus. Meanwhile, researching the capabilities of Amplify is critical to implement user authentication and authorization features such as login and signup. By focusing on these two topics, the frontend team can ensure that the application is both visually appealing and functional for users to interact with while also ensuring the security of user data. The backend team has been focused on creating a Cognito user pool for using it like only users database. The Cognito user pool provides a secure and managed solution for user authentication, enabling users to register and sign in to the application with ease while also ensuring their data remains protected. By establishing these foundational components, the backend team is ensuring that the application can handle user data in a reliable and secure manner, thereby laying the groundwork for a robust and effective backend infrastructure.

**Decisions Made:** The development team has made a decision to implement the topics discussed in our recent meetings. The frontend team will focus on creating the UI and researching login/signup functionality with Amplify, while the backend team will continue to work on creating a Cognito user pool and DynamoDB database. These decisions were made after careful consideration of the project requirements and the need to establish a secure and functional application. By implementing these decisions, the development team is working towards building a reliable and user-friendly application that meets the project goals. The team will continue to collaborate and communicate as needed to ensure that the implementation process proceeds smoothly and that the project progresses on schedule.

**Tasks Assigned:**

- Enris Kumi – management tasks to check the work of each member, and work for cognito user pool with Faik Koprenca.
- Faik Koprenca – work with Enris for cognito user pool.
- Redi Ceni, Daniel Abdiaj – research for how we can create different user interfaces and how we can implement them.
- Fjoralb Tashi, Ervin Shyti – prepare different user scenarios in diagrams style.

**Time, Place, and Agenda for Next Meeting:**

- Time: 10:00-12:00, 18/04/2023 at Epoka University
- Talk about what have we done last week, what we will do and if there is something blocking our progress.
